

What And How The Two Researcher Should Do Their Work (STEP BY STEP GUIDE)

Task 1: Collect NER Cultural Assets

- Find **8-10 cultural symbols** from each of these states: Assam, Meghalaya, Mizoram, and Nagaland.
- Examples: Traditional dances (Bihu, Wangala), festivals (Hornbill, Mim Kut), animals (Rhinoceros, Hornbill), food (Assamese tea, bamboo shoots), crafts (Mizo bamboo weaving).
- Create a simple table with columns: **Category, Name, Description, Image URL**.
- Save this as a Google Sheet or Word doc.

Why? We need these to make our game feel "home" to NER elders

Task 2: Find Scientific Proof

- Search for **3 research papers or articles** that prove cognitive games help dementia or memory loss patients.
- For each, write down: **Title, Key finding (1 sentence), Source link**.
- Examples to search for: *"cognitive training dementia"*, *"memory games elderly"*, *"brain training mild cognitive impairment"*.

Why? When judges ask "Does this actually work?", we need to show them real science

Task 3: Find NER & Dementia Statistics

- Find these 3 numbers:
 1. Total elderly population (60+) in the North Eastern Region.
 2. Total dementia patients in India (approx 8.8 million is known – confirm this).
 3. Number of neurologists or mental health professionals in NER (to prove scarcity).
- Also find internet penetration stats for rural NER (to prove why we need offline).

Why? These numbers will go into our PPT to prove the problem is real.

(These research topics should be submitted till tomorrow do it as fast as you can)
